

## Bike Brightly, Bike Safely

**Be seen.**

It's time to be seen during the darker months of the year by increasing your visibility. Make being seen on your bike in low-lit hours and at night a part of your active lifestyle.

### **Be flashy.**

- Legally, cyclists at dawn, dusk and night need a front white light and a back red reflector. For safety's sake, also use a back flashing red light.
- Add lights to bags, spokes and racks, and consider using a headlamp for more visibility.
- Be prepared with extra batteries and lights just in case.

### **Be reflective.**

- Increase visibility by putting reflective tape or stickers on shoes, backpacks, messenger bags and jackets—really, anywhere and everywhere!

### **Invest in a vest or jacket.**

- A variety of different vests and cycling jackets can be found that provide 360 degree reflection. Look for them at outdoor, sports and bike stores.
